Project Title: State Park Waste Water Systems Condition Assessments

Category: B. Water Resources

Total Project Budget: $1,173,776

Proposed Project Time Period for the Funding Requested: June 30, 2021 (2 yrs)

Summary:
The project will result in an inventory and functional assessment of septic and waste water systems located in state parks and a 10-year Construction Improvement Plan (CIP) which will be used to guide future capital-investment decisions.

Name: David Johnson

Sponsoring Organization: MN DNR

Title: Design & Construction Manager

Address: 500 Lafayette Road

St. Paul MN 55347

PROJECT TITLE: State Park Waste Water Systems Condition Assessments

I. PROJECT STATEMENT
The project will result in an inventory and functional assessment of septic and waste water systems located in state parks and a 10-year Construction Improvement Plan (CIP) which will be used to guide future capital investment decisions. Many of these systems are located in close proximity to sensitive groundwater/drinking water and surface water systems across the state. Minnesota state parks have over 10 million visitors annually and they expect that the septic and wastewater systems will be in good working order and compliance with state and local requirements. The Department of Natural Resources (DNR) has seven permitted systems and the Minnesota Pollution Control Agency (MPCA) has determined that six of the seven systems would qualify as “fundable” under MPCA rules. DNR will be working with MPCA as a project partner in this inventory and assessment.

II. PROJECT ACTIVITIES AND OUTCOMES
The project activities are as follows:

1. Develop a complete and accurate inventory of septic and waste water systems at MN DNR State Parks.
2. Complete a functional assessment of identified systems using the MPCA Municipal Scoring system for waste water and septic systems.
3. Attribute the inventory data into a Cartegraph OMS ArcGIS, cloud based, asset management system and the Minnesota Department of Administrations’ Archibus Data Base. Cartegraph will allow us to develop a GIS based, real-time, cloud based asset management system to better plan for system upgrades and repairs.
4. Develop a 10 year CIP that will address failing or inadequate waste water and septic systems, protect ground water and drinking water resources as well as protecting sensitive and Outstanding Resource Value Waters in our state parks. The CIP will include an evaluation of the use of solar and other renewable energy systems to power wells, lift stations and pumps in our water and waste water systems statewide. The study will also include the opportunity to expand connections to municipal systems.

ENRTF BUDGET: $1,173,776

IV. LONG-TERM- IMPLEMENTATION AND FUNDING: Upon completion of the project, the DNR will use the asset management system provided by Cartegraph to inform biennial updates to our 10-year CIP and our biennial bonding requests for Natural Resource Asset Preservation (NRAP) funds (MN Statutes 84.946). The DNR will continue to work with the MPCA on an annual basis to ensure that our systems are functioning as required by MN water quality rules and statutes.

V. TIME LINE REQUIREMENTS: This project will take two years to complete.

F. Project Manager Qualifications and Organization Description

Minnesota Department of Natural Resources:
State Park Waste Water Systems Condition Assessments
Project Manager: David C. Johnson
Qualifications: Mr. Johnson has over 27 years of experience in managing complex water, waste water and water resources projects in both the public and private sectors.
Education: Civil Engineering, University of MN, 1989-1990
MS Environmental Biology, University of MN 1989
BA Biology and Chemistry, Gustavus Adolphus College, 1987
Professional Experience
Design and Construction Manager, MN DNR December 2016-Present
Senior Hydrologist, MN BWSR December 2015-December 2016
Senior Project Manager, HDR Engineering, INC., July 1999-December 2015
Senior Hydrologist, MN DNR April 1997-July 1999
Board Conservationist, MN BWSR November 1995-April 1997
Hydrologist MN DNR June 1991-November 1995

Project Responsibilities: The project manager will be responsible for: providing overall project management and technical direction for the project; directing project staff; contracting for professional services in support of the project; coordinating with project partners; directing the development of atlas reports; and preparing and submitting project work plans, updates and final reports.

Organization Description: The Minnesota Department of Natural Resources (DNR)’s mission is to work with citizens to conserve and manage the state’s natural resources, to provide outdoor recreation opportunities, and to provide for commercial uses of natural resources in a way that creates a sustainable quality of life.
